

SYSTEM AND METHOD FOR VERTICAL SOFTWARE SOLUTIONS

ABSTRACT

[0048]

A partnership program that facilitates delivery of a substantially complete vertical solutions to companies through a network of accessible software programs. The programs form a software stack to provide the solution and are accessed by a single contact point so that the companies need only communicate with one source and not necessarily multiple software programs and vendors. The programs in the software stack provide a variety of services such that together they provide a substantially complete solution to processing transactions for the companies.
